DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 8-11 in the paper filed 12/30/2003 is acknowledged. Claims 29-75 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in paper filed 12/30/2003. A complete reply to the final rejection must include cancelation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 8, 9 and 11 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1,2 and 4 of U.S. Patent No. 6,351,370.

Art Unit: 1751

Although the conflicting claims are not identical, they are not patentably distinct from each other because they both disclose a solid electrolytic capacitor comprising a valve acting metal having pores, a dielectric film formed on a surface of the valve acting metal and a solid electrolyte layer comprising an electrically conducting polymer composition layer provided on the dielectric film, in which the composition contains sulfoquinone anion having at least one sulfo anion group connected to an additional ring.

Although the structures of the instant reference appears to be different, each would read on the same compounds and classes of compounds.

The structure of claim 2 in the reference, corresponds to the *instant claim 8 and 9*, when the substituents R1 and R2 are "combined to each other at any position to form at least one divalent chain for forming at least one 5-, 6- or 7-membered saturated or unsaturated ring structure, X represents a hetro atom selected from S. With respect to the *instant claim 11*, the reference discloses a sulfoquinone anion is at least one selected from the group consisting 9,10-anthraquinone, 1,4-anthraquinone and 1,2-anthraquinone.

In view of the forgoing, the above claims have failed to be patently distinguishable over prior art.

The remaining references listed on form(s) 892 and/or 1449 have been reviewed by the examiner and are considered to be cumulative to or less material than the prior art references relied upon in the rejection above.

Art Unit: 1751

Allowable Subject Matter

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Although the instant reference has a general teaching that would read on the compound of claim 10, it would not have been obvious to one of ordinary skill in the art to use the specifically disclosed compounds in view of the reference's general teaching.
